<b>A brief note containing working experience relevant to the post:</b>		<p>As a Computer Science and Engineering graduate, I bring hands-on experience in software development, data processing, and automation solutions, aligning well with the Junior Research Fellow (JRF) position requirements. During my internship as a Python Full Stack Intern at Pacewisdom, I developed SQL queries for business intelligence and data analysis, collaborated with cross-functional teams, and created automated testing solutions, which are crucial for meteorological data processing and quality control. My role as a Java-SQL Intern at Qspiders further honed my skills in SQL query writing and automation, improving operational efficiency. Leading projects such as the Effective Liquified Fuel Management System and the AI-Driven Facial Recognition Assisted Missing Person Recovery System, I demonstrated leadership, team collaboration, and the ability to implement automation features and optimized SQL queries. Proficient in Python, SQL, and automation tools, my technical skills and project experiences make me a strong candidate for contributing to research and development in meteorological data processing, numerical modeling, and remote sensing applications.</p>
